

Permissions & Data Safety

Last updated 25 July 2026

This page explains the device permissions the ALGOZ OPS app requests and why, and summarises the data disclosures that correspond to the Apple App Store privacy details and the Google Play Data safety section.

Prominent disclosure. ALGOZ OPS collects location data to enable live operational oversight, distance and bearing tools, geofence and rally alerts, and SOS and welfare safety features, even when the app is closed or not in use, while an operative is on duty and has location sharing enabled. Location is shared only with authorised members of the operative’s own company. It is never sold and never used for advertising.

Permissions we request

Permission	Why	When
Location (foreground and background)	Show the operative on the live map, compute distance and bearing to key points, raise geofence and rally alerts, and support SOS and welfare checks.	Only while on duty with location sharing on. Background access lets command keep safety oversight when the phone is locked or the app is in the background.
Camera and photos	Attach photographs to map pins and after action debriefs, and upload operation documents.	Only when you add a photo or file.
Notifications	Deliver operational alerts and check in prompts.	When you enable notifications.
Storage / files	Select and upload images and documents.	When you attach a file.

You can change permissions at any time in your device settings. Turning off location stops location sharing and the features that depend on it.

Data safety summary

Data type	Collected	Shared	Purpose
Location (precise)	Yes	Within the Customer company only	App functionality and safety
Personal identifiers (name, email, phone, role)	Yes	Within the Customer company only	Account and app functionality
Photos and files	Yes	Within the Customer company only	App functionality
